SUMMARY

Results-driven Software Developer with 1.5+ years of industry experience specializing in cross-platform mobile development (Flutter/Dart) and scalable web architectures (React, Laravel). Demonstrated track record of improving code quality metrics, reducing production defects, and delivering offline-first mobile solutions. Currently pursuing a B.Sc. in Computer Science at Telkom University Jakarta, with a strong foundation in Agile development, TDD, and clean architecture principles.

EXPERIENCE

PT ELNUSA PETROFIN – Jakarta, Indonesia

Backend Developer & Technical Writer (August 2022 – Januari 2023)

- **Quality Assurance & Testing:** Architected and led end-to-end unit testing strategy for the DIMS (Distribution Information Management System), driving 100% code coverage across 12 critical modules and reducing production-level bug occurrence by 40%, directly lowering post-release hotfix cycles.
- **System Troubleshooting:** Diagnosed and resolved 15+ high-priority production defects through systematic root-cause analysis and structured debugging protocols, achieving a 25% reduction in customer support escalations and maintaining 99%+ system uptime across the DIMS platform.
- **Standard Operating Procedures:** Authored and maintained comprehensive API documentation and technical SOPs covering 3+ system components, reducing new developer onboarding time by an estimated 30% and cutting average feature development turnaround from planning to deployment.

PT ILLIYIN STUDIO – Malang, Indonesia

Mobile App Developer (January 2022 – May 2022)

- **Performance Optimization:** Engineered 5+ production-grade mobile screens using Flutter and Firebase, implementing BLoC/Provider state management and enforcing Git Flow branching strategy across a 4-person team, resulting in measurably improved code review efficiency and a 15% reduction in average build iteration time.
- **Automated Testing:** Built a comprehensive automated testing suite of 40+ widget and unit test cases using Flutter Test framework, cutting regression bug rate by 23% across 3 release cycles and elevating overall application stability score on internal QA benchmarks.
- **Cross-functional Collaboration:** Served as the primary technical bridge between a 3-person UI/UX design team and backend engineers, translating 100% of design specifications into pixel-accurate Flutter implementations and ensuring zero-defect API contract alignment across all 8 sprint deliverables.

STMIK KHARISMA – Karawang, Indonesia

Kotlin Development Trainer (October 2021 – November 2021)

- **Technical Mentorship:** Mentored 20+ participants through a structured Android development curriculum, guiding each to independently build and deploy a functional Kotlin-based Android application covering control flows, data handling, and Material Design UI/UX principles.
- **Assessment & Evaluation:** Conducted regular code reviews and technical evaluations to monitor participant progress and ensure adherence to software engineering best practices.

SMK BHINNEKA – Karawang, Indonesia

Web Development Instructor (September 2021 – October 2021)

- **Project-Based Instruction:** Spearheaded the end-to-end development of the school's official website as a primary instructional project, teaching students how to translate design requirements into functional code.
- **Engineering Training:** Delivered intensive training on core web technologies, including HTML5, CSS3, JavaScript (ES6), and Bootstrap, with a strong emphasis on responsive web design and performance.

PROJECTS

Mubit: Islamic Habit Tracker | Flutter, Dart, Riverpod, Isar NoSQL, Kotlin DSL

<https://github.com/dithdyt/mubit-app>

- **Offline-First Architecture:** Designed and implemented an offline-first prayer time engine using the Adhan Algorithm for on-device calculations, eliminating 100% dependency on external prayer APIs and achieving sub-millisecond local data retrieval — enabling full app functionality in zero-connectivity environments.
- **Advanced Data Management:** Architected a reactive data layer using Isar NoSQL for high-speed local persistence and Riverpod (AsyncNotifier) for type-safe state management, delivering real-time habit synchronization with <50ms UI response latency across 5+ habit tracking modules.
- **Visualization & UX:**Integrated fl_chart library to render interactive 20-day worship consistency heatmaps and engineered a dynamic fasting forecast algorithm with dual-calendar (Hijri-Gregorian) synchronization, reducing user manual input by an estimated 80% for fasting schedule planning.

EDUCATION

Telkom University Jakarta (Jakarta, Indonesia | 2023 - Present)

GPA: 3.76 / 4.00

Bachelor of Science in Computer Science

IDN Boarding Vocational High School (Bogor, Indonesia | 2020 - 2023)

GPA: 3.47 / 4.00

Computer Science

SKILLS

- **Languages:** Dart, Swift, Kotlin, JavaScript (ES6+), PHP, SQL, HTML/CSS.
- **Frameworks/Libraries:** Flutter, SwiftUI, React.js, Vue.js, Nest.js, Laravel, GetX.
- **Tools & Databases:** Git, Firebase, Docker, PostgreSQL, MySQL, SQLite, RESTful APIs.
- **Skills:** Clean Code, CI/CD, Unit Testing/TDD, Agile / Scrum / Sprint, Clean Architecture, Technical Communication, Cross-functional Collaboration.
